

POLSTORE

PROFESSIONAL STORAGE
SOLUTIONS

2nd Edition

“DO YOU FIT THE POLSTORE PROFILE?”

Buying into our product range attracts the type of client who has a passion for precise engineering design, who embraces detail, understands true quality and cares for that purchase decision. We understand you must make the right choice of purchase. Justification is key.

We champion workshop storage solutions in heavy use environments – it creates efficiency, reduces waste, lowers costs, improves attitude, and motivates people within the workplace. Our passion for sustainable design and manufacture filters through to all our product ranges.

Polstore Storage Systems are proud to be the exclusive reseller of FAMEPLA

Workshop Storage Systems for UK & Ireland. As a team our mission is to supply a consistent high-end storage product ensuring the client experiences an exceptional level of service. FAMEPLA, located in north east Italy, are leaders in the manufacture of workshop storage equipment and industrial furniture.

In this catalogue we focus on a selection from our wider range of products, but not to be forgotten, we thrive on bespoke solutions supporting our exact client needs.

The Polstore team is as passionate and committed about our solutions, as you are about your own workspace. Our experienced project sales team can

offer advice, visit and work with you from concept design through to installation. We are 100% confident we can exceed expectations and we will not walk away until we have.

It couldn't be easier to purchase from us. Visit our online store at www.polstore.co.uk or get in touch with our Customer Service Team to discuss your project requirements.

40-43	Workbenches		
44-45	Mobile Workbenches		

WHY WE DO IT BETTER?

Our drawer cabinets are tough and robust, even after 40 years of heavy use they are still in service.

01 WELDED CONSTRUCTION

Put us to the test, put some weight in it

No pop rivets or clip systems, which is why there is zero twist or distortion under load, ensuring smooth drawer movement, each and every time (4500kg SWL/cabinet). Use as a bench or machine stand freeing up valuable workshop space.

02 NON-CORROSIVE

Built to last – two layer process

Our environmentally friendly painting process ensures a high resistant coating – all metalwork is initially dipped and painted inside and out to eliminate corrosion. A second coat is then applied colour choice dependant.

03 PAINT FINISH

Key for durability and after all you want it to look good

All products are supplied in a smooth semi-gloss paint finish. If you want to customise – go ahead, we can do what you want!

04 POSITIVE LOCKING SYSTEM

The one thing, you don't want to fail

A strong steel vertical locking bar rotates to create a positive locking system. The anti-tilt mechanism ensures you can only open one drawer at a time. Supplied with two keys (Master key available). **Upgrade to electronic locking.**

05 CABINET SIZE

It makes for quite a decision

There is a multitude of sized Polstore cabinets. The system is purposely designed to be modular so you can create any specification, allowing the cabinets to be re-configured at any time.

06 DRAWER & SLIDE SYSTEM

Super smooth action – more weight the better

Manufactured from steel the top of the drawer has a secondary fold to avoid sharp edges giving the drawer strength and stability. The handle is anodised and can be removed if damaged avoiding full drawer replacement. A neat labelling system is supplied comprising of a paper card insert and plastic cover strip. There are 2 types of drawers – NORMAL = 90% extension with a max load per drawer of 100kg. FULL = 100% extension with a max load of 200kg per drawer.

07 DRAWER DIVIDER KITS

Get creative, don't overlook this

The side walls of the drawers have location slots every 17mm allowing for the installation of a large range of drawer divider kits. The drawer base is perforated to enable partitions to be mechanically fixed stopping migration of items stored.

08 ACCESSORIES FOR YOUR CABINET

Personalise and upgrade – stand out from the crowd

Two-way pallet bases allow you to move the cabinet with a pallet truck or forklift, at a moment's notice. Base plinths for raising the cabinet from the floor, preventing damage, wear and flood risk. Hinged lockable doors creating a drawer / cupboard mix. 3 & 4 sided upstand and removable smooth rubber mat – stopping items rolling off and transforming the top of the cabinet into a work surface. Perforated panels and hook kits can be fixed to the back of the cabinet for hanging tools and other items. Worktops can be supplied in a number of materials and finishes, turning your cabinet into a robust and useful workbench.

Polstore drawer storage cabinets thrive on weight loads – the heavier the load stored, the smoother the movement. 100% of the drawer volume is used as the height of the drawer side and rear matches the drawer front. This prevents loose storage items falling out from the sides.

Benelli manzoni

Benelli PMT800 is a press with a transfer system powered by a straightening line that allows the production of the fundamental component of our products: the drawer carriages.

These 3mm thick parts with sealed steel roller bearings allow our drawers to have a normal or full extension and up to a 200kg safe working load rating.

In this 800 tonne press, one of our nine 7000kg moulds is installed according to the type of guide. The mould consists of 5 stations that are able to produce 10 pieces per minute in a completely automated way thanks to special handles that transport the workpieces from one station to another.

The shearing station is the first to receive the raw sheet metal, which then precisely cuts the sheet before being passed onto the other stations.

In the subsequent moulding stations, the drawer carriage doesn't start to come to life until it reaches the bending station that gives it its final shape.

We are very fond of Benelli because it was one of the first machines to arrive at Famepla, when one night in 2000 it arrived on special transport directly from Florence after having covered almost 300km and taking 40 days to be commissioned.

WORKSHOP FIT OUT SPECIALISTS TAKE UP THE CHALLENGE!

Polstore has been working on some excellent projects so far this year – we have always enjoyed the challenge to create a workspace perfectly suited to the application.

The client will have a brief, an idea; usually stored in their head. Our job is to interpret this inspiration, design the space, specify the correct equipment (cost effectively) from our manufacturing portfolio, deliver and install.

The installation can be the greatest challenge – 200kg cabinets upstairs, long worktops to scribe in around beams, floors to look after and advanced skills such as fitting vertical drawer units with 500kg slides. No floor is level!

We also need to be flexible with our standard range – sure we have a wide range of sizes but distance between walls never match our standard dimensions – that would be too easy.

We have the production capability to modify standard to bespoke making sure we fit without wasting precious storage space. This is where the survey needs to be detailed and accurate – we may need to visit several times to check and double check but it's all part of the premium service we offer.

Polstore like to take on any challenge – from private garages and home workshops to large military and automotive installations.

Our process is simple – you contact us, we visit, listen, survey and design. You will be presented with a detailed drawing with your quotation as an initial starting point. From there we work with you until you are happy with the design and ready to make that final sign-off decision.

Once the manufacture process is complete, we can install or leave that up to you. So if you are looking for a storage solution that creates an efficient and organised workspace, a product that is fit for purpose, a durable product with proven 40+ years service, a product that saves time and money... then it's time to give our customer services a call.

If you fit this profile and when you're ready to take the next step – call us on 0800 008 6861 or email enquiries@polstore.co.uk

PRECISE, PROFESSIONAL STORAGE

Certain clients require precise storage solutions. Not only to fit into their workshop facility but also into their company culture and overall aesthetic. A key element is to understand the requirement and work pattern within an area and with the input from site engineers and advice from the Polstore Project Manager expert storage solutions are integrated into the workspace.

Polstore can offer a variety of storage solutions to accommodate this diverse requirement. The machining centres require CNC tool storage cupboards, inspection areas require benching and drawer cabinets, assembly areas are fitted with heavy duty drawer systems and roller shutter door shelving and now a new 3D printing room fitted out with a multi-level benching arrangement.

Where our workshop storage product range excels is the drawer storage cabinet design. A wide inventory of heavy fixings and consumables was previously stored in plastic and metal stacking containers. The issue here is, like shelving, how much wasted space there is above the contents being stored up to the top of the container or shelf.

They are also open to the surrounding dust and dirt particles in the air which over time tarnishes the new consumables especially if it's a slow moving item. We recommend moving these items into pull out drawers. Our drawer system, due to the 3mm steel carriages and guides, each have a 200kg load capacity.

The drawer is divided up into individual locations, each location is stock filled reducing wasted space and labelled thus giving the user excellent presentation. As the drawers glide in and out the operatives experience is second to none.

As always with Polstore's professional service we offer a free no obligation site survey followed up with a detailed proposal and necessary drawings.

PRODUCTS / **ELECTRONIC ASSEMBLY BENCHES**

HEIGHT ADJUSTABLE BENCH - ELECTRONIC OPERATION

There are several benefits to a sit stand workbench – the ability to switch to standing and sitting postures reduces physical stress, keeps you active and improves productivity. Gone are the days where you complain about worksurface heights just not being quite right. With a press of a button you can instantly personalise the working surface height to your optimum needs.

Due to electronically powered motorised bench legs the adjustment varies from a height of 750 mm up to a maximum of 1050 mm. The smooth and controlled movement makes the adjustment effortless.

The maximum load capacity of our electronic workbenches is 400 kg, giving you the flexibility to customise the bench design with additional features including drawer cabinets, power bars, perforated panels, shelves, overhead rails and lighting options.

With a premium hard wearing laminate, 40mm worktop core and anodised aluminium support legs this makes our Series E48 workbench perfectly suited to workshop, warehouse and light industrial environments.

PRODUCTS / ANTI-FATIGUE MATTING

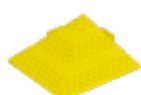

EASY ASSEMBLY

Anti-fatigue floor mats help reduce fatigue and increase productivity making them ideal for the workplace. Whilst giving extra comfort for prolonged standing they improve health and safety with a yellow safety border. The underside structure design allows for cable management. Easy to assemble with clip connectors.

If you're anything like the staff in our office, you will have built up a large collection of tools over your lifetime, to indulge in your passion of all things mechanical.

If you ever sat down and added up this investment in equipment, it would be both costly and time consuming to replace, if lost or damaged. My particular interest is in vintage Vespa scooters and having recently installed a Polstore roller shutter shadow board in my workshop, (to compliment my Polstore drawer cabinet) I am able to keep all my most used tools secure, in view and to hand.

This has not only allowed me to halve the time it takes to rebuild an engine, (but not halve the time I spend in the workshop),

but I am also able to keep an eye on any tools that I may have lent out.

In addition to the shadow board, the Polstore drawer cabinet beneath is used to house all my additional tools (socket sets, multi meter, power tools etc) as well as any consumables I may require, all neatly partitioned off and ready to use.

The shadow board and drawer cabinet have neatly and securely stored, what used to be housed in two cantilever toolboxes, two cupboards, a large trunk and numerous plastic boxes. This has allowed me to clear the workbench of the tools I need for a particular job and actually use the workbench to do the job in hand. The equipment in the pictures is well over

five years old and looks and performs exactly as it did on day one.

So, if you share our passion for all things mechanical & don't want to settle for second best, then why not contact us on 0800 008 6861 or email enquiries@polstore.co.uk to see how we can help you.

STORING PRECIOUS ARTEFACTS IN TOOL BOXES

WHO'D OF THOUGHT?

Admittedly it seems the most unlikely thing on first inspection, rare artefacts stored in toolboxes, surely not? But the art and museum industry have been using Polstore drawer storage cabinets since the 1960's.

Looking at the requirements for storing tools within a drawer cabinet: it is somewhere safe, stable and secure. Every item has its place making storage and retrieval an easy and satisfying process. These requirements are the same for the Heritage sector with the added requirement of being conservation grade.

Prior to using metal drawer cabinets, the Heritage sector traditionally used wooden plan chests and shelving. These had a number of disadvantages, as they weren't very secure, the drawers wouldn't fully extend or run smooth: in fact, quite often they would jam. The internal design did not allow for partitions which in turn led to

artefacts being damaged. They attracted pests which would make their home in the wooden plan chests, whilst they devoured the collection. All these problems went away by using Polstore's heavy duty steel drawer cabinets. The collection was now safe and secure with the integral anti-tilt locking mechanism preventing theft and accidents (due to more than one drawer being opened at a time).

The drawers opened and closed with ease extending fully allowing complete access to the collection. The internal drawer dividing system allowed maximum use of the drawer protecting the collection for years to come. A crucial issue of 'off-gassing' was resolved with the application of an inert paint finish. The migration from wood to metal was a win-win situation except for the bugs of course!

Our role as a Heritage storage solution

consultant was primarily focused back of house in the store rooms locked away from the public eye. But a new trend has been occurring moving the collections out of the dark depths and into bright gallery spaces for visitors to enjoy.

Taking the design of our cabinets one step further with the addition of lockable security glass panels, our units allow the collection to be viewed in public areas protecting artefacts whilst enhancing the visitors experience.

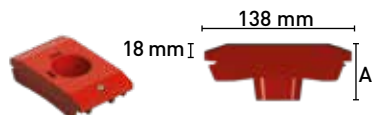

So if you are on the lookout for heritage storage solutions, contact us on 0800 008 6861 or email enquiries@polstore.co.uk to see how we can help you.

COMMERCIAL SMARTKEY SOLUTIONS

One single electronic key can open up to 3,000 padlocks, cylinders and camlocks

eLOQ is an intelligent smart key and access control system which has been designed to offer not only high security, but also offers a greater degree of flexibility and auditability not otherwise possible with traditional access solutions.

Although eLOQ locks are electronic, they contain no batteries and do not require wiring. With a wide range of easily retro-fittable cylinders and padlocks available, introducing eLOQ means you can implement incredibly flexible levels of remote access control to your organisation.

With a collection of advance features such as; audit trails of key usage, the ability to disable lost keys and electronic rekeying & scheduling, eLOQ embraces modern technologies and innovations to bring a unique control for the protection of goods and assets.

The eLOQ Access Control system operates in much the same way as a traditional lock & key set-up, but with the ability to personalise unique time and date restrictions for each user. This means you have complete control over which locks can be accessed and when.

eLOQ Key

Central to the eLOQ access control system is the individual User Keys; each of which can be programmed to each users own specific schedule and access requirements.

eLOQ Locks

With a wide range of different retro-fittable cylinders and padlocks available for a range of different environments, our locks are quick & easy to change and install.

eLOQ Key Readers

Required for scheduling and programming locks & keys, the eLOQ readers take many different forms from Wall-Readers, Computer Interfaces and Mobile Apps.

eLOQ Software

Easily update and amend user schedules using our secure, cloud-based software which has been designed to be user-friendly. Run complete audit reports on locks and keys to examine previous access activities.
